

REQUIREMENTS FOR 204B TERM PAPER

The term paper should be in APA format, but otherwise the content and organization is fairly flexible. It should include:

1. *Title Page* - title, name, and affiliation
2. *Abstract* - no more 120 words (or, more accurately, no more than 960 characters)
3. *Introduction* - no heading necessary, but do include title at top of page
4. *Methods* - sample, measures, procedures (subsections probably advisable)
5. *Results* - multiple regression analysis (at least 3 predictors; some in-text statistics for one or more variables)
6. *Discussion* - reservations, implications, future research (may be combined with Results to produce a “Results and Discussion” section)
7. *References* - doesn’t have to be long
8. *Tables* - at least one presenting complete regression equation
9. *Figures* - optional, but good for presenting interaction effects, curvilinear functions, and path diagrams
10. *Printout* - the raw output in the statistical software of your choice

Please note that the paper should be double-spaced throughout, including references and tables.
